v3.11 | 13 November 2026 | Literature snapshot: 13 November 2026

Abstract

This manuscript provides a dated, citable snapshot of the SparcLab human body communication (HBC) survey, a continuously maintained literature and performance resource. It brings together published research and tracks integrated-circuit (IC) energy efficiency through publication-year plots. The 13 November 2026 snapshot contains 337 records: 103 IC publications, 147 channel/model publications, and 87 other references. All records are listed in a compact bibliography with stable identifiers and source links where available. IC plots begin in 2006, the earliest year represented in the IC collection, and display transmitter, receiver, and combined transmitter–receiver energy separately. Machine-readable bibliographic and measurement files accompany the manuscript. The resource supports publication discovery and inspection of archived IC performance data.

1 The survey at a glance

This continuously maintained literature and performance survey brings together the records maintained by the SparcLab HBC survey website. Readers can search the PDF by title, first author, venue, year, or record identifier, and follow a linked title or DOI to its source. The accompanying data retain full stored author strings, additional source links, and measurement notes. Table 1 reports the total collection sizes.

Table 1: Total records in the 13 November 2026 catalogue.

Collection	Records	Location in this manuscript
Integrated circuits	103	Section 5
Channels and models	147	Section 6
Other literature	87	Section 7
Total	**337**	Complete catalogue

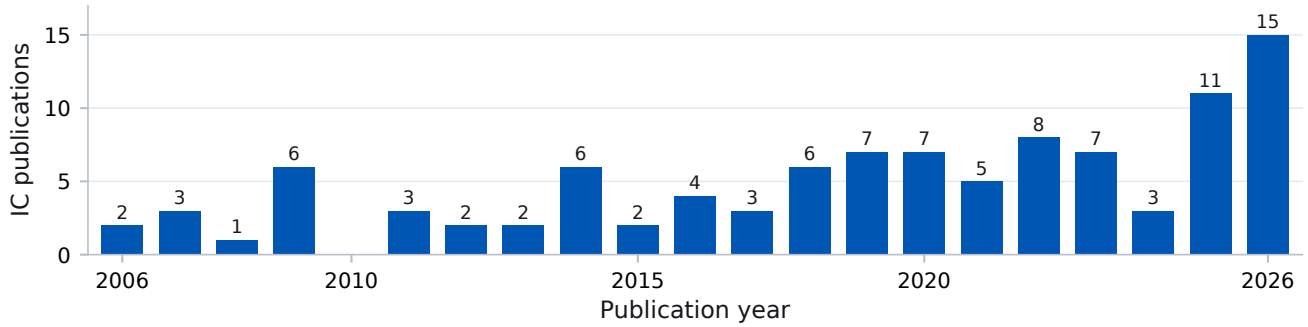

Figure 1: IC publication counts by stored publication year, starting with the earliest included IC papers in 2006. Counts total 103 publications; conference and journal reports are counted as separate records when both are retained. The 2026 count covers the snapshot through 13 November 2026.

The collection includes HBC and related body-area/implant literature. Its three categories support finding papers; only records classified as eligible fabricated custom solid-state ICs enter the comparison plots. These are counts of publications, not counts of unique chips. The survey is a curated collection and does not claim exhaustive coverage of the field.

2 IC energy efficiency over time

Figure 2 provides a visual record of the energy values in the IC collection. Each point is a stored operating point; one publication can contribute more than one point. Lower energy per bit indicates greater energy efficiency within the stated measurement scope.

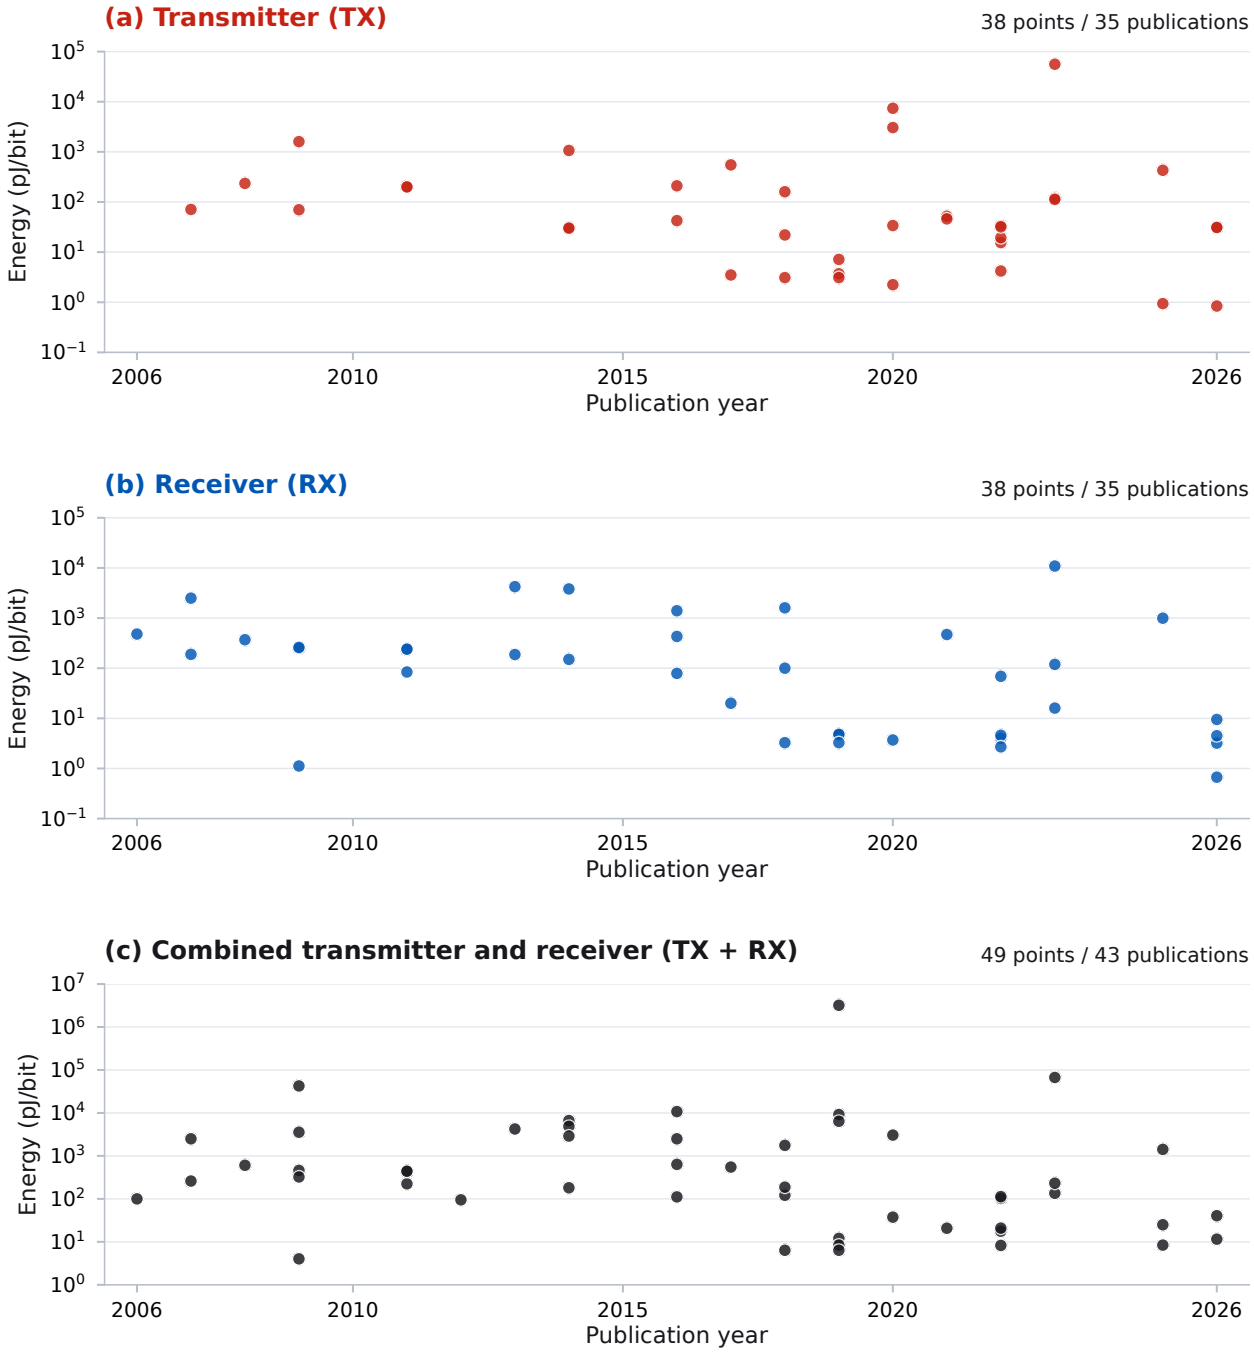

Figure 2: Archived IC energy per bit versus publication year: (a) TX, (b) RX, and (c) TX+RX. The plots use positive numeric entries from the same eligible IC records as the website. Vertical axes are logarithmic and have panel-specific ranges. Combined values are those reported or explicitly calculated in the archive. Missing values are omitted; separate panels can therefore contain different publications. Overlapping points can conceal one another. Source identifiers and values for every plotted point are supplied in `anc/energy_points.csv`.

3 Using and citing this edition

Reading the plots. The plots retain stored energy scopes, operating conditions, and publication years. The IC archive includes adjacent body-area and implant modalities as well as electrical HBC. Data rates, component exclusions, and link configurations differ between papers; consult the original publications and record notes before making a quantitative comparison. No trend fit or performance ranking is imposed. Four inherited combined-energy entries (158, 184, 186, 303) are withheld because the stored total is below a listed component value. Original values are retained in the data pending source reconciliation.

Finding a paper and its data. Sections 5–7 contain all 337 records, grouped by category and ordered from recent to earlier years. Red reference numbers connect entries to the full dataset. Titles are retained in full; long author lists are abbreviated. There are 335 DOI links with the full DOI strings printed. The source package includes `catalogue.bib`, `anc/catalogue.csv`, the full `anc/survey_snapshot.json`, `anc/energy_points.csv`, and scripts to regenerate the catalogue and figures. Missing metadata and measurements remain explicit.

Citation. Cite the original paper for its technical result. Suggested resource citation: Shreyas Sen, "Human Body Communication: A Living Survey of Integrated Circuits and Channel Models," v3.11, 13 November 2026; literature snapshot: 13 November 2026. The companion online resource is the SparcLab HBC survey website.

4 Release history

Version / date	Release and conference context
V1 19 June 2022	Original launch during Shreyas Sen's invited talk, "Secure and Efficient Internet of Bodies (IoB) using Body as a 'Wire'." in the "Human Body Communications" workshop at the IEEE Radio Frequency Integrated Circuits Symposium (RFIC).
V2 23 February 2023	Updated survey released during Shreyas Sen's invited talk, "Secure and Efficient Internet of Bodies (IoB) using Body as a 'Wire'." in Forum 7, "Advanced Circuits and Technologies for Wearable and Implantable Devices," at the IEEE International Solid-State Circuits Conference (ISSCC).
v3.10 October 2026	Expanded catalogue, compact bibliography, scope screening, and disclosure updates.
v3.11 13 November 2026	Current website and survey manuscript release; publisher-verified additions and preserved disclosures. It includes the literature search and verified backfills completed on 13 November 2026.

This revision preserves the prior removal of 12 out-of-scope or author-excluded records; stable reference numbers are retained. Version naming now uses `v<major>.<month>`; `.11` denotes November. The full release date records the year. Editorial wording updated 14 November 2026; data unchanged.

AI usage and conflict of interest

AI usage statement. Artificial intelligence (AI), including large language models accessed through OpenAI ChatGPT and Codex, has been used for literature discovery, bibliographic organization, and preparation of the website, manuscript, and scripts. AI-assisted content may contain mistakes. If you find a mistake, please let us know.

Conflict-of-interest statement. Shreyas Sen is a founder, Chairman and Chief Technology Officer of Quasistatics, Inc. (doing business as Ixana). This affiliation is disclosed as a potential competing interest. The survey includes publications coauthored by Shreyas Sen.

Inclusion requests and corrections

We may have missed relevant papers. If you would like a relevant paper published in a Tier-1 journal or conference to be considered for inclusion, please email shreyas@purdue.edu with its title, full citation, and DOI or source link. Requests will be reviewed for inclusion.

If you find a mistake, please email shreyas@purdue.edu with the paper identifier or DOI and a description of the error. Reported issues will be reviewed, and confirmed corrections will be incorporated into subsequent updates.

Acknowledgements

This survey was inspired by Boris Murmann's ADC Performance Survey. The author thanks Gourab Barik, Baibhab Chatterjee, Shovan Maity, Mayukh Nath, Debayan Das, Donghyun Seo, David Yang, and Arunashish Datta for their contributions to V1 and V2 of the survey.

[245] A mm-Sized Implantable Medical Device (IMD) With Ultrasonic Power Transfer and a Hybrid Bi-Directional Data Link. Charthad *et al.* JSSC, 2015. DOI: 10.1109/jssc.2015.2427336.

[252] A 33μW/node Duty Cycle Controlled HBC Transceiver system for medical BAN with 64 sensor nodes. Lee *et al.* CICC, 2014. DOI: 10.1109/cicc.2014.6946058.

[253] A 5.2mW IEEE 802.15.6 HBC standard compatible transceiver with power efficient delay-locked-loop based BPSK demodulator. Hyunwoo Cho *et al.* ASSCC, 2014. DOI: 10.1109/asscc.2014.7008919.

[254] A 60Mb/s Wideband BCC Transceiver with 150pJ/b RX and 31pJ/b TX for Emerging Wearable Applications. Junghyup Lee *et al.* ISSCC, 2014. DOI: 10.1109/isscc.2014.6757529.

[255] A mm-sized implantable device with ultrasonic energy transfer and RF data uplink for high-power applications. Jayant Charthad *et al.* CICC, 2014. DOI: 10.1109/cicc.2014.6946071.

[256] A Power-Efficient Switched-Capacitor Stimulating System for Electrical/Optical Deep Brain Stimulation. Hyung-Min Lee *et al.* JSSC, 2014. DOI: 10.1109/jssc.2014.2355814.

[257] A Scalable, 2.9 mW, 1 Mb/s e-Textiles Body Area Network Transceiver With Remotely-Powered Nodes and Bi-Directional Data Communication. Nachiket Desai *et al.* JSSC, 2014. DOI: 10.1109/jssc.2014.2328343.

[269] A 37.5uW Body Channel Communication Wake-Up Receiver With Injection-Locking Ring Oscillator for Wireless Body Area Network. Cho *et al.* TCSI, 2013. DOI: 10.1109/tcsi.2013.2249173.

[270] A 5.5mW IEEE-802.15.6 wireless body-area-network standard transceiver for multichannel electro-acupuncture application. Hyungwoo Lee *et al.* ISSCC, 2013. DOI: 10.1109/isscc.2013.6487811.

[275] A 259.6μW nonlinear HRV-EEG chaos processor with body channel communication interface for mental health monitoring. Roh *et al.* ISSCC, 2012. DOI: 10.1109/isscc.2012.6177020.

[276] A Batteryless 19μW MICS/ISM-Band Energy Harvesting Body Area Sensor Node SoC. Fan Zhang *et al.* ISSCC, 2012. DOI: 10.1109/isscc.2012.6177004.

[283] A 0.24-nJ/b wireless body-area-network transceiver with scalable double-FSK modulation. Joonsung Bae *et al.* ISSCC, 2011. DOI: 10.1109/isscc.2011.5746207.

[285] A low energy crystal-less double-FSK transceiver for wireless body-area-network. Bae Joonsung *et al.* ASSCC, 2011. DOI: 10.1109/asscc.2011.6123632.

[286] A Low Energy Injection-Locked FSK Transceiver With Frequency-to-Amplitude Conversion for Body Sensor Applications. Bae Joonsung *et al.* JSSC, 2011. DOI: 10.1109/jssc.2011.2109450.

[297] A 1.12 pJ/b Inductive Transceiver With a Fault-Tolerant Network Switch for Multi-Layer Wearable Body Area Network Applications. Jerald Yoo *et al.* JSSC, 2009. DOI: 10.1109/jssc.2009.2028952.

[298] A 10.8 mW Body Channel Communication/MICS Dual-Band Transceiver for a Unified Body Sensor Network Controller. Namjun Cho *et al.* JSSC, 2009. DOI: 10.1109/jssc.2009.2032592.

[299] A 2.75mW wideband correlation-based transceiver for body-coupled communication. Alberto Fazzi *et al.* ISSCC, 2009. DOI: 10.1109/isscc.2009.4977379.

[300] A 490uW fully MICS compatible FSK transceiver for implantable devices. Joonsung Bae *et al.* VLSI, 2009. link not recorded.

[301] A 5.2 mW Self-Configured Wearable Body Sensor Network Controller and a 12 W Wirelessly Powered Sensor for a Continuous Health Monitoring Syste. Jerald Yoo *et al.* JSSC, 2009. DOI: 10.1109/jssc.2009.2034440.

[303] Body Channel Communication for Low Energy BSN/BAN. Hoi-Jun Yoo *et al.* APCCAS, 2009. DOI: 10.1109/apccas.2008.4745947.

[308] A 60 kb/s–10 Mb/s Adaptive Frequency Hopping Transceiver for Interference-Resilient Body Channel Communication. Namjun Cho *et al.* JSSC, 2008. DOI: 10.1109/jssc.2008.2012328.

[311] A 0.2-mW 2-Mb/s Digital Transceiver Based on Wideband Signaling for Human Body Communications. Song *et al.* JSSC, 2007. DOI: 10.1109/jssc.2007.903080.

[312] A 0.9V 2.6mW Body-Coupled Scalable PHY Transceiver for Body Sensor Applications. Seong-Jun Song *et al.* ISSCC, 2007. DOI: 10.1109/isscc.2007.373446.

[314] Energy-Efficient Human Body Communication Receiver Chipset Using Wideband Signaling Scheme. Seong-Jun Song *et al.* IEMBS, 2007. DOI: 10.1109/iembs.2007.4352783.

[318] A 2Mb/s Wideband Pulse Transceiver with Direct-Coupled Interface for Human Body Communications. Seong-Jun Song *et al.* ISSCC, 2006. DOI: 10.1109/isscc.2006.1696290.

[319] A 4.8-mW 10-Mb/s Wideband Signaling Receiver Analog Front-End for Human Body Communications. Song *et al.* ESSCIR, 2006. DOI: 10.1109/esscir.2006.307496.

6 Publication Catalogue: Channels and models (147 records)

[009] A Physics-Based Channel-Level Human Twin for Galvanic-Coupling Wearable Communication Links. Silvia Mura *et al.* IEEE Transactions on Molecular, Biological, and Multi-Scale Communications, 2026. DOI: 10.1109/tmbmc.2026.3735206.

[013] Biophysical Circuit Modeling of Electro-Quasistatic Multi-Human Body Communication. David Yang *et al.* TBME, 2026. DOI: 10.1109/tbme.2025.3631139.

[014] Bit-Level Modeling and Reception Analysis of Concurrent Transmissions in Galvanic Coupled Communication. Shuang Yang *et al.* TMTT, 2026. DOI: 10.1109/tmtt.2026.3713913.

[015] Comparable Characterization of Capacitive and Galvanic Intrabody Communication Channel. Kayhan Ateş *et al.* TBME, 2026. DOI: 10.1109/tbme.2026.3683805.

[020] Effect of Nearby Metals on Electro-Quasistatic Human Body Communication. Samyadip Sarkar *et al.* TBME, 2026. DOI: 10.1109/tbme.2025.3616233.

[021] Efficient communication channel for smart contact lens with resonant magnetoquasistatic coupling. Sukriti Shaw *et al.* Front. Electron., 2026. DOI: 10.3389/felec.2025.1704891.

[022] Fat-intra-body communication system using flexible wearable antennas with human and torso phantom validation for biomedical applications. Bappaditya Mandal *et al.* Scientific Reports, 2026. DOI: 10.1038/s41598-026-55490-0.

[023] Finite Element Analysis of a Human Body Communication Channel with a Wrist-Worn Transmitter and Grounded Receiver. Adesh Ankush *et al.* ICCE, 2026. DOI: 10.1109/icce67443.2026.11449670.

[025] Hybrid Modeling of Capacitive Human Body Communication Systems to Capture Channel Variability. Cheng Tang *et al.* TBME, 2026. DOI: 10.1109/tbme.2026.3719639.

[028] Multiuser human body communication via inter-user contact: Evaluation of signal propagation with electromagnetic simulations and wearable measurements. Dairoku Muramatsu. AIP Advances, 2026. DOI: 10.1063/5.0315668.

[034] Tuning-Enhanced Power–Rate Tradeoff in Magnetic Resonant Coupling Human Body Communication: A Preliminary Measurement Study. Ziliang Wei *et al.* CSRSWTC, 2026. DOI: 10.1109/csrswtc71154.2026.11669795.

[049] Body-resonance: transmission line-like wireless links enabling high-speed wearable communication. Samyadip Sarkar *et al.* Commun. Eng., 2026. DOI: 10.1038/s44172-025-00533-z.

[342] Systematic Measurement and Characterization of Channel Variability in Body-Resonance Human Body Communication. Qi Huang *et al.* TIM, 2026. DOI: 10.1109/tim.2026.3731787.

[343] Body-Coupled Communication: Principle, Design Criteria, and Feasibility Validation. Hang Qi *et al.* Commun. Mag., 2026. DOI: 10.1109/mcom.001.2600402.

[040] A Preliminary Study of Dual-Band Metamaterial Applied to Magnetic Resonance Human Body Communication. Sumei Hong *et al.* CSRSWTC, 2025. DOI: 10.1109/csrswtc67757.2025.11383996.

[043] An experimental investigation of modulation scheme for galvanic coupling intra-body communication in wireless body area network. Jia Wen Li *et al.* Physica Scripta, 2025. DOI: 10.1088/1402-4896/add813.

[046] Analysis of a Hybrid Intrabody Communications Scheme for Wireless Cortical Implants. Assefa K. Teshome *et al.* Electronics, 2025. DOI: 10.3390/electronics14224410.

[051] Channel Variability of Body-Resonance Human Body Communication. Qi Huang *et al.* EMBC, 2025. DOI: 10.1109/embc58623.2025.11254597.

[052] Data-Driven Path Loss Estimation in Human Body Communication: Enhancing Efficiency via Parameter Prioritization and Transfer Learning. Hamideh Esmaeili *et al.* EuMC, 2025. DOI: 10.23919/eumc65286.2025.11235242.

[053] Design and Analysis of Miniaturized Implantable Antenna with Metamaterial for Fat-Intrabody Communication. Nurr Izzaliya Natasha Azizi *et al.* RFM, 2025. DOI: 10.1109/rfm67034.2025.11284366.

[055] Effects of Dielectric Properties of Human Body on Communication Link Margins and Specific Absorption Rate of Implanted Antenna System. Soham Ghosh *et al.* Sensors, 2025. DOI: 10.3390/s25113498.

[057] Enhancing Physical Security of Body Resonance Human Body Communication. Qi Huang *et al.* IEEE Transactions on Antennas and Propagation, 2025. DOI: 10.1109/tap.2025.3614897.

[058] Feasibility of Modal Propagation Through Human Body for Human Body Communications. Vignesh Manohar *et al.* AP-S/CNC-USNC-URSI, 2025. DOI: 10.1109/ap-s/cnc-usnc-ursi55537.2025.11266416.

[060] From Microwave Measurement to Application: Enhancement of Fat-Intrabody Communication by Advanced Computational Techniques. Pramod K. B. Rangaiah *et al.* GeMiC, 2025. DOI: 10.23919/gemic64734.2025.10979071.

[061] Galvanic Coupling Channel Characterization for Wearable Devices. Chiara Cavigliano *et al.* Proceedings of the 12th Annual ACM International Conference on Nanoscale Computing and Communication, 2025. DOI: 10.1145/3760544.3764132.

[063] Human Body Communication between Pocketed and On-body Devices. Qi Huang *et al.* EMBC, 2025. DOI: 10.1109/embc58623.2025.11254596.

[065] Human-structure and human-structure-human interaction in electro-quasistatic regime. Samyadip Sarkar *et al.* Commun. Eng., 2025. DOI: 10.1038/s44172-024-00333-x.

[068] Individual Difference Frequency Adaptive Adjustment Method for Magnetic Resonant Human Body Communication. Lina Chen *et al.* EMBC, 2025. DOI: 10.1109/embc58623.2025.11252981.

[069] Measurement of Channel Gain Characteristics of Human Body Communication Systems by using Impulse Signals. Keita Kajihara *et al.* IEEJ Transactions on Fundamentals and Materials, 2025. DOI: 10.1541/ieejfms.145.76.

[070] Measurement of Channel Gain Characteristics of Human Body Communication Systems by Using Pseudo-Noise Signals. Ai-ichiro Sasaki *et al.* APEMC, 2025. DOI: 10.1109/apemc62958.2025.11051684.

[071] Mitigation of Common Return Path in Wearable Galvanic Coupled Intrabody Communication. Kayhan Ateş *et al.* EMC Turkiye, 2025. DOI: 10.1109/emcturkiye67151.2025.11207573.

[072] Modeling and Analysis of Intrabody Communication for Biometric Identity in Wireless Body Area Networks. Igor Khromov *et al.* Applied Sciences, 2025. DOI: 10.3390/app15084126.

[073] Multiphysics finite element investigation of galvanic transmission in dynamic human body communications. Aaron Roopnarine *et al.* Frontiers in Antennas and Propagation, 2025. DOI: 10.3389/fanpr.2025.1509439.

[074] Off-to-In Body Channel Modeling for a Practically Feasible Energy Efficient Implantable BAN. Sameeksha Chaudhary *et al.* VTC2025-Fall, 2025. DOI: 10.1109/vtc2025-fall65116.2025.11310110.

[076] Propagation analysis of implantable human body communication system for neurostimulators and structural evaluation of abdominal models. Miyu Kodama *et al.* AIP Advances, 2025. DOI: 10.1063/5.0242285.

[078] The Circuit Model for Electro-Quasistatic Human Body Communication. Lingke Ding *et al.* ISCAS, 2025. DOI: 10.1109/mwscas53549.2025.11244535.

[081] Towards Wideband Characterization and Modeling of In-Body to On-Body Intrabody Communication Channels. Matija Roglić *et al.* Bioengineering, 2025. DOI: 10.3390/bioengineering13010042.

[082] Wideband Strongly Coupled Magnetic Human Body Communication for Low Rate Wireless Body Area Networks (BANs): A Numerical Analysis. Gunjan Kumari *et al.* NCC, 2025. DOI: 10.1109/ncc63735.2025.10983451.

[339] Can Magnetic Excitation in IBOB Body Resonance be Picked Up by Distant Wearable Capacitive Rx?. Samyadip Sarkar *et al.* MAPCON, 2025. DOI: 10.1109/mapcon65020.2025.11425027.

[340] Channel Measurements for Ultra-Low-Power Tissue-Coupled Communication in Personalized Cardiac Pacing and Continuous Monitoring. Anyu Jiang *et al.* MAPCON, 2025. DOI: 10.1109/mapcon65020.2025.11425941.

[341] Is In-Body to Out-of-Body Communication Primarily Inter-Device Coupling?. Ayan Biswas *et al.* MAPCON, 2025. DOI: 10.1109/mapcon65020.2025.11426691.

[347] Bandwidth Enhancement Technique for Magnetic Dual Resonant Coupling for IMD Data Telemetry. Sukriti Shaw *et al.* BioCAS, 2025. DOI: 10.1109/biocas67066.2025.00091.

[087] A Lumped Circuit Model for Implantable Body-Coupled Channel. Cheng Han *et al.* ISCAS, 2024. DOI: 10.1109/iscas58744.2024.10558056.

[089] A Preliminary Exploration of Magnetic Resonance Coupled Human Body Communication in Out-to-In Body Transmission for Leadless Pacemakers. Shuang Yang *et al.* CIVEMSA, 2024. DOI: 10.1109/civemsa58715.2024.10586453.

[095] Channel Characterization of Implantable Intrabody Communication through Experimental Measurements. Kayhan Ateş *et al.* Proceedings of the 11th Annual ACM International Conference on Nanoscale Computing and Communication, 2024. DOI: 10.1145/3686015.3689364.

[096] Channel Variability in Human Body Communication with External Objects in Body Resonance Region. Qi Huang *et al.* EMBC, 2024. DOI: 10.1109/embc53108.2024.10782121.

[098] Comparison of Galvanic and Capacitive Coupled Intrabody Communication Channel by using Isolation Transformer. Kayhan Ateş *et al.* TIPTEKNO, 2024. DOI: 10.1109/tiptekno63488.2024.10755245.

[100] Dataset on the human body as a signal propagation medium for body coupled communication. Juris Ormanis *et al.* Data in Brief, 2024. DOI: 10.1016/j.dib.2023.109892.

[102] Determining carrier frequency for implantable human body communication based on transmission efficiency–electromagnetic interference trade-off. Miyu Kodama *et al.* AIP Advances, 2024. DOI: 10.1063/5.0210654.

[105] Enabling Physically Secure Human Body Communication in Body Resonance Region with Faraday Fabric. Qi Huang *et al.* IMBioC, 2024. DOI: 10.1109/imbioc60287.2024.10590306.

[107] Experimental Channel Characterization of Human Body Communication Based on Measured Impulse Response. Anna Vizziello *et al.* IEEE Transactions on Communications, 2024. DOI: 10.1109/tcomm.2024.3370468.

[108] Exploring the Effects of Encapsulated Capacitive and Galvanic Transmitters for Implant-to-Wearable Scenarios in Human Body Communication. Anyu Jiang *et al.* EMBC, 2024. DOI: 10.1109/embc53108.2024.10782968.

[109] Field-Circuit Combination Method for Solving the Detuning Problem of Magnetic Resonance Human Body Communication. Lixuan Huang *et al.* J-ERM, 2024. DOI: 10.1109/jerm.2024.3367247.

[112] Investigation of Resonance Effect in Human Body Channel Simulations and Measurements. Jose Alcala-Medel *et al.* Joint with AP-S Symposium, 2024. DOI: 10.23919/inc-usnc-ursi61303.2024.10632395.

[113] Material Property Based Analysis of Human Body Communication in Body Resonance Regime. Samyadip Sarkar *et al.* IMBioC, 2024. DOI: 10.1109/imbioc60287.2024.10590460.

[114] Numerical Analysis of Implantable Human Body Communication for Abdominal Neurostimulator. Miyu Kodama *et al.* ISAP, 2024. DOI: 10.1109/isap62502.2024.10846356.

[115] Numerical Phantoms with Different Structures for Evaluating Implantable Human Body Communication. Miyu Kodama *et al.* GCCE, 2024. DOI: 10.1109/gcce62371.2024.10760770.

[116] Preliminary Investigation of Electromagnetic Compatibility Analysis for Magnetic Resonance Human Body Communication. Shaoze Jiang *et al.* CSRSWTC, 2024. DOI: 10.1109/csrswtc64338.2024.10811652.

[155] A Body Channel Communication Transceiver with a 16x Oversampling CDR and Convolutional Codes. Ching-Che Chung *et al.* VLSI-DAT, 2022. DOI: 10.1109/vlsi-dat54769.2022.9768085.

[162] An Experimental Study of Digital Communication System with Human Body as Communication Channel. Chengyi Zhang *et al.* BSN, 2022. DOI: 10.1109/bsn56160.2022.9928477.

[166] Deep learning-based Human Body Communication baseband transceiver for WBAN IEEE 802.15.6. Abdelhay Ali *et al.* Engineering Applications of Artificial Intelligence, 2022. DOI: 10.1016/j.engappai.2022.105169.

[167] Differential Isolation Integrated Circuit Design in Galvanic-Coupled Human Body Communication. Fengjie Lin *et al.* APCAP, 2022. DOI: 10.1109/apcap56600.2022.10069512.

[168] Driver Status Monitoring System with Body Channel Communication Technique Using Conductive Thread Electrodes. Beomjin YUK *et al.* IEICE Transactions on Communications, 2022. DOI: 10.1587/transcom.2021ebp3059.

[169] Energy-efficient Body-channel Communication for Distributed Flexible Sensors. Xu Liang *et al.* IFETC, 2022. DOI: 10.1109/ifetc53656.2022.9948503.

[171] Impedance Matching Method for Magnetic Resonance Coupling Human Body Communication. Yupei Zheng *et al.* APCAP, 2022. DOI: 10.1109/apcap56600.2022.10069779.

[172] Improvement of Signal Power in Intrabody Communication Using an Impedance Adjustment Circuit. Kiyotaka Hayami *et al.* GCCE, 2022. DOI: 10.1109/gcce56475.2022.10014169.

[174] Nearest Neighbor Classification of Binary Channel States for Secure Human Body Communication. Ai-ichiro Sasaki *et al.* TIM, 2022. DOI: 10.1109/tim.2022.3209796.

[179] The Internet of Bodies: The Human Body as an Efficient and Secure Wireless Channel. Abdulkadir Celik *et al.* IEEE Internet of Things Magazine, 2022. DOI: 10.1109/iotm.001.2100209.

[180] Ultrasonic Backscatter Communication for Implantable Medical Devices. Qianqian Wang *et al.* IEEE Transactions on Molecular, Biological and Multi-Scale Communications, 2022. DOI: 10.1109/tmbmc.2022.3182572.

[182] Wearable Vital Signal Monitoring Prototype Based on Capacitive Body Channel Communication. Qi Huang *et al.* BSN, 2022. DOI: 10.1109/bsn56160.2022.9928512.

[183] Wireless Control Combining Myoelectric Signal and Human Body Communication for Wearable Robots. Taisuke Iguchi *et al.* Micromachines, 2022. DOI: 10.3390/mi13020290.

[189] Body-coupled power transmission and energy harvesting. Jiamin Li *et al.* Nature, 2021. DOI: 10.1038/s41928-021-00592-y.

[201] BodyWire-HCI: Enabling New Interaction Modalities by Communicating Strictly During Touch Using Electro-Quasistatic Human Body Communication. Shovan Maity *et al.* ACM, 2020. DOI: 10.1145/3406238.

[205] Video-Capable Ultrasonic Wireless Communications Through Biological Tissues. Gizem Tabak *et al.* TUFFC, 2020. DOI: 10.1109/tuffc.2020.3020776.

[224] ISCAS - An Auto Loss Compensation System for Non-contact Capacitive Coupled Body Channel Communication. Zhao *et al.* ISCAS, 2018. DOI: 10.1109/iscas.2018.8351340.

[232] Body coupled communication: Towards energy-efficient body area network applications. Jerald Yoo. RFIT, 2017. DOI: 10.1109/rfit.2017.8048239.

[241] Experimental Evaluation of Impulsive Ultrasonic Intra-Body Communications for Implantable Biomedical Devices. G. Enrico Santagati *et al.* TMC, 2016. DOI: 10.1109/tmc.2016.2561277.

[242] SocialHBC: Social Networking and Secure Authentication using Interference-Robust Human Body Communication. Shreyas Sen. ISLPED, 2016. DOI: 10.1145/2934583.2934609.

[258] An implantable system for intracranial neural recording applications. Gurkan Yilmaz *et al.* BIOCAS, 2014. DOI: 10.1109/biocas.2014.6981749.

[263] Medium access control and rate adaptation for ultrasonic intrabody sensor networks. G. Enrico Santagati *et al.* TNET, 2014. DOI: 10.1109/tnet.2014.2316675.

[268] Sonar Inside Your Body: Prototyping Ultrasonic Intra-body Sensor Networks. G. Enrico Santagati *et al.* INFOCOM, 2014. DOI: 10.1109/infocom.2014.6848216.

[273] Body Area Networks: Safety, Security, and Sustainability. Sandeep K. S. Gupta *et al.* Book, 2013. link not recorded.

[279] Challenges and implications of using ultrasonic communications in intra-body area networks. Laura Galluccio *et al.* WONS, 2012. DOI: 10.1109/wons.2012.6152227.

[287] A wireless batteryless deep-seated implantable ultrasonic pulser-receiver powered by magnetic coupling. Sai Chun Tang *et al.* TUFFC, 2011. DOI: 10.1109/tuffc.2011.1931.

[288] Bio-Medical CMOS ICs - Wearable Healthcare System. Hoi-Jun Yoo *et al.* Book, 2011. DOI: 10.1007/978-1-4419-6597-4_10.

[315] Low Energy On-Body Communication for BSN. Hoi-Jun Yoo *et al.* BSN, 2007. DOI: 10.1007/978-3-540-70994-7_3.

[316] Low Power Frequency-Shift Keying Demodulators for Biomedical Implants. Ro-Min Weng *et al.* EDSSC, 2007. DOI: 10.1109/edssc.2007.4450315.

[320] ISWC - Low Power Wearable Audio Player Using Human Body Communications. Seong-jun Song *et al.* ISWCS, 2006. DOI: 10.1109/iswc.2006.286358.

[326] A near-field-sensing transceiver for intra-body communication based on the electro-optic effect. M. Shinagawa *et al.* TIM, 2004. DOI: 10.1109/tim.2004.834064.

[327] Development and performance analysis of an intra-body communication device. K. Hachisuka *et al.* Sensor, 2003. DOI: 10.1109/sensor.2003.1217117.

[329] Fabric area network – a new wireless communications infrastructure to enable ubiquitous networking and sensing on intelligent clothing. Alex P.J.Hum. Elsevier, 2001. DOI: 10.1016/s1389-1286(00)00185-7.
